When building your files, please use the guidelines below:

- All files must be built as greyscale.
- All imported bitmap files must be tiffs, jpegs or bmps in grayscale color mode. No gifs please.
- Bitmaps must be at least 300 dpi at the size they are placed or imported into the ad.
- Remove all other colors from the color list leaving only black and percentages of black (this is depending on program used).
- If files are over 10 megs, please stuff or zip the files before emailing. This will keep the file from being corrupted.
- **Conversions not meeting the above guidelines will cost a minimum of \$40.**
- Freehand MX — imported files must be embedded and grayscale color mode and fonts must be converted to paths.
- Editable PDF Files — fonts must be converted to outlines with no compression to line art and Highest Print Quality. The file must be importable or editable.
- Illustrator CS2 — fonts must be converted to outlines, imported files must be embedded and grayscale color mode, with no compression to line art.
- InDesign — fonts must be converted to outlines, imported files must be embedded and grayscale color mode, with no compression to line art.
- Tiffs — at least 300 dpi at 100% ad size and in grayscale color mode.
- Jpegs — at least 300 dpi at 100% ad size and in grayscale color mode and highest quality compression.
- Macintosh .eps — fonts must be converted to outlines, imported files must be embedded and in grayscale color mode, with no compression to line art, file must have an 8 bit BW preview and must be an editable .eps file.
